ERC Grant Proposal Writing

The **European Research Council (ERC)** stands for scientific excellence. ERC Grants are among the most prestigious research funding opportunities in Europe and serve as a visible recognition of a researcher's scientific quality and international standing.
The ERC supports high-risk, innovative and pioneering research ideas. **Scientific excellence is the decisive evaluation criterion.**

To support you in preparing a proposal for an ERC Grant – and in turning your research idea into a compelling ERC proposal – the **Research Funding Advisory Office** warmly invites you to an **English-language online training course, "ERC Grant Proposal Writing."** The **two-day training course**, held as two half-day sessions, will be delivered by **Yellow Research**, a consultancy based in the Netherlands with many years of experience in European research funding, particularly in conducting ERC proposal writing trainings. The training has also been recommended to us by researchers who have had very positive experiences with Yellow Research's courses.

What makes an ERC proposal convincing - The training focuses on the key question: **How can an excellent research idea be presented in a way that convinces international ERC evaluators and reviewers?**
