LEIBNIZ-INSTITUT FÜR NEUROBIOLOGIE MAGDEBURG

Creative Commons Licences and Open Science
How to choose?

We would like to cordially invite you all to a lecture by

Dr Jasmin Schmitz

from

ZB MED, the German National Library of Medicine –
Life Sciences Information Centre.

Abstract:

Creative commons (CC) licences play an important role in open science research practices: They offer the opportunity to share scholarly works openly and at the same time be in control of how users are allowed to re-use the published material. CC licences also help to increase the visibility of research outputs.

The presentation will give an overview on how the creative commons system works and how to find a licence that fits best. It will also give attention to aspects such as FAIR data and data management, data protection and AI related issues.

Dr Schmitz heads the PUBLISSO department –Publication Advice for the Life Sciences– and acts as deputy head of the Open Science programme area at ZB MED in Köln (https://www.publisso.de/).
